Hip and Knee Joint Injections offered by Valley Pain Specialists

Dr. Mortazavi and the friendly staff at Valley Pain Specialists are pleased to provide intra-articular hip and knee joint injections (figs. 1 & 2) for the diagnosis and management of hip and knee pain.

Patients referred to Valley Pain Specialists with hip or knee pain referable to osteoarthritis (OA) who have failed more conservative therapy will be considered candidates for intra-articular injection. Local anesthetics and corticosteroids are commonly injected in an effort to provide both diagnostic and therapeutic benefit. Viscosupplementation of the knee may also be considered in patients with mild to moderate OA. Injections are performed in a relaxed outpatient environment under fluoroscopy.
